DEDICATED WATER METER READINGS FOR SPRING BILL CONSUMPTION ADJUSTMENT

Dear Customer:

Below is a drawing of a typical designated water meter. This is the meter that records all of the water being used outside of your home for such things as lawn watering, car washing, etc. All you need to do is copy the numbers from your designated meter onto the drawing at the bottom of the page *exactly* as they appear on your meter. If you have two meters and are not sure which one is your designated meter and which is the Mass. American Water meter record the readings from both meters with a question mark next to each. We have previous readings on both and should be able to determine which is the dedicated meter based upon this information.

If there is a decimal point on the meter, you will need to denote it in its exact spot on the drawing to insure that a proper credit on your sewer bill is given. Sometimes, rather than a decimal point, a darker area may denote the tenths of each cubic foot. Below is an example of each type. Compare yours, fill in the numbers and mail the reading back to the Cohasset Water Department, 339 King Street, Cohasset.

It is essential that this be done promptly. Returns by March 1 would be greatly appreciated, as each meter account must be evaluated for accuracy before processing of your account can take place. Any request for credit received after the closing date for the May bill (April 1st) will not be processed and your abatement for that Fiscal Year will be considered forfeited. If you wish an acknowledgement please enclose a self-addressed stamped envelope and we will mail you back a copy of your reading indicating the date received.

Your annual sewer use charge, calculated in the spring of each year will be based on all water entering your house less the designated meter measured amount. If for any reason you have a problem reading your meter, you can contact the Water Department office and someone will assist you.

Thank you in advance for your cooperation.
